

SURAJ BALIARSINGH

Computer Science & Engineering Student | Software Developer | Frontend Developer
Berhampur, Ganjam, Odisha, India | +91-8327727825 | singhsuraj66188@gmail.com
LinkedIn | GitHub

SUMMARY

Computer Science and Engineering student with hands-on experience building Python/Flask backend systems, JavaScript web interfaces, cybersecurity monitoring tools, and internship-discovery automation. Developed **SentinelX**, a centralized cybersecurity monitoring and threat detection system, and currently developing **JobPilot**, an internship discovery and eligibility-matching platform using Python, Playwright, and SQLite. Skilled in Python, JavaScript, REST APIs, Flask, SQLite, Playwright, Git/GitHub, web development, cybersecurity, and Generative AI. Interested in software development, backend engineering, AI/ML, cybersecurity, and full-stack development.

EDUCATION

B.Tech – Computer Science & Engineering	2023–2027 (Present)
Kalam Institute of Technology, Govindpur, Odisha	4 th Year
Class XII	2021
Arihant Junior College, Berhampur, Odisha	
Class X	2019
ST. Xavier Higher Secondary School, Berhampur, Odisha	

TECHNICAL-SKILLS

Programming: Python, Java, C/C++, JavaScript, SQL
Web Development: HTML5, CSS3, JavaScript, Responsive Web Design, Frontend Development
Backend & APIs: Flask, REST APIs, API Development, Backend Development
AI/ML: Generative AI, Machine Learning Fundamentals, AI APIs, Prompt Engineering, AI Agents, RAG Concepts
Cybersecurity: Cybersecurity Monitoring, Threat Detection, Risk Scoring, Process Monitoring, Network Monitoring
Databases: SQLite, MySQL, MongoDB, Database Design
Automation: Playwright, Web Automation, Structured Data Extraction
Tools: Git, GitHub, Docker, LaTeX, PlantUML, VS Code, Chrome DevTools
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering, SDLC

PROJECTS

SentinelX – Centralized Cybersecurity Monitoring and Threat Detection System *Python / Flask / JavaScript / SQLite / 2026–Present*

- Developed a modular cybersecurity monitoring system using Python and Flask to monitor Windows system activity, running processes, network connections, events, and security alerts.
- Implemented rule-based threat detection for suspicious Windows utilities and severity-based risk scoring using INFO, LOW, MEDIUM, HIGH, and CRITICAL levels.
- Built process, network, and system monitoring modules with event logging and SQLite persistence for storing monitoring data and security events.
- Developed REST API endpoints for system status, events, alerts, risk, processes, network activity, health checks, and reports, and integrated them with a JavaScript/HTML/CSS dashboard.
- Integrated and debugged monitoring, detection, database, API, and dashboard components as a complete academic cybersecurity project.

JobPilot – Intelligent Job and Internship Application Automation Platform *Python / Playwright / SQLite / 2026–Present*

- Developing an internship discovery and eligibility-matching platform to reduce repetitive manual searching across internship listings.
- Built an AICTE internship discovery workflow using Playwright and structured parsing to extract work mode, duration, start date, seats, stipend, deadline, skills, and eligibility information.
- Implemented SQLite-based storage and an eligibility/matching engine that compares internship requirements against a structured candidate profile.
- Designed the platform for future multi-platform expansion while keeping the current implementation focused on internship discovery, structured data extraction, and matching.

Secure Login System – Academic Project *Python / Authentication / Cybersecurity*

- Developed a secure authentication system with password hashing, input validation, session management, and CAPTCHA-based protection.

- Applied software engineering practices including UML modeling, SDLC documentation, testing, and modular system design.

Personal Portfolio Website

HTML5 | CSS3 | JavaScript | Git/GitHub

- Built a responsive personal portfolio website to present projects, technical skills, and developer profile information.
- Applied frontend development, responsive design, accessibility-focused UI practices, and Git/GitHub version control.

PRACTICAL EXPERIENCE

Software Development – Academic & Personal Projects

2025–Present

- Built and debugged functional applications across web development, authentication, cybersecurity monitoring, automation, document/data processing, and AI-oriented workflows.
- Practiced modular programming, API integration, database persistence, version control, documentation, and software development lifecycle practices.
- Used Git/GitHub, VS Code, LaTeX, PlantUML, and developer tools to manage source code, documentation, debugging, and project workflows.

CERTIFICATIONS & ACHIEVEMENTS

- **Meta – Introduction to Data Analytics**, Coursera Mar 2025
- **Yonsei University – IoT Wireless & Cloud Computing: Emerging Technologies**, Coursera Apr 2025
- **Google Cloud – Introduction to Generative AI**, Coursera Mar 2025
- **Cisco Networking Academy – Introduction to Cybersecurity** Jul 2025
- **Google Developer Program – Build with Gemini: Track 3 – Software Developer**
- **Google Developer Program – Chrome DevTools User** Sep 2026
- **Google Developer Program / Google Cloud – AI Agent Intensive: Vibe Coding Tokyo**

RELEVANT COURSEWORK

Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering, Machine Learning, Web Technologies, Optimization in Engineering, Data Science & Analytics

DEVELOPMENT ACTIVITIES

- Practicing Data Structures and Algorithms on LeetCode with focus on arrays, strings, hash maps, two-pointer techniques, edge cases, and time/space complexity.
- Maintains public software projects and development work on GitHub, including cybersecurity monitoring and internship automation projects.

INTERESTS

Software Development, Backend Development, Frontend Development, Web Development, Generative AI, AI/ML, Cybersecurity, Automation, Full-Stack Development
